

THE BRECKENRIDGE STORY

9,500'
ELEVATION
BRECKENRIDGE, CO

A MONTH AND A HALF EARLY.

How Breckenridge Golf Club defied elevation to deliver tournament-ready greens by May 1st — unheard of at 9,500 feet above sea level.

Breckenridge Golf Club

BRECKENRIDGE, COLORADO

Alex Kosel · Golf Course Superintendent

Playing Above The Clouds

At 9,500 feet above sea level, Breckenridge Golf Club operates in one of the most demanding environments in American golf. Night temperatures dip into the 20s well into spring. The season runs barely five months. Every day counts — and every green matters.

GREENJACKET SYSTEM USED

Clear Permeable Cover

Applied across all 29 greens each spring. Traps solar heat to raise soil temperatures, accelerating green-up in conditions that would otherwise keep surfaces dormant for weeks.

Green While the Mountain Still Has Snow

The contrast speaks for itself. Covered greens emerged vibrant and ready for play — weeks ahead of where they would normally be at this altitude.

PROTECTED GREEN — DEEP SPRING SNOW

Vivid green turf while snow covers everything around it.

RESULT — WITH CLEAR PERMEABLE COVER

*Tournament-ready by May 1st.
Dormant surrounds tell the story.*

6_{wk}

AHEAD OF SCHEDULE
ON ALL 29 GREENS

Covers applied for just two weeks, watered several times throughout the day to raise soil temperatures — the result was growing conditions a month and a half ahead of what the course would normally see. At 9,500 feet, that is a season-changing advantage.

What Alex Saw

Superintendent Alex Kosel deploys GreenJacket Clear Permeable covers across all 29 greens every spring. What he and his team observe year after year has made it an easy call to keep coming back.

ACCELERATED SOIL TEMPERATURE

The covers trap solar heat and allow watering to drive soil temps up rapidly — even when nighttime lows remain in the 20s. This is the engine behind the early green-up advantage at altitude.

SIX WEEKS EARLIER GREEN-UP

Covered greens achieve high-quality putting conditions up to six weeks ahead of uncovered surfaces — critical when the entire season runs only five months.

CONSISTENT WINTER RECOVERY

Even after winters with ice damage, desiccation, and winterkill, the covers help problem areas reach optimal growing temperatures and bounce back faster than ever.

GUEST EXPERIENCE ELEVATED

Guests are consistently blown away by green quality so early in the season. At this climate and elevation, great early conditions were once simply not possible.

Guests are blown away at the product we can provide so early in the season in our climate and elevation. It's really a no brainer for us after seeing the results year after year.

FIELD NOTES · SUPERINTENDENT OBSERVATIONS

A No Brainer. *Year After Year.*

Breckenridge doesn't use GreenJacket because of a bad winter. They use them every single spring — because the results are that consistent and that significant. At 9,500 feet, that kind of reliability isn't optional. It's essential.

BIGGEST BENEFIT

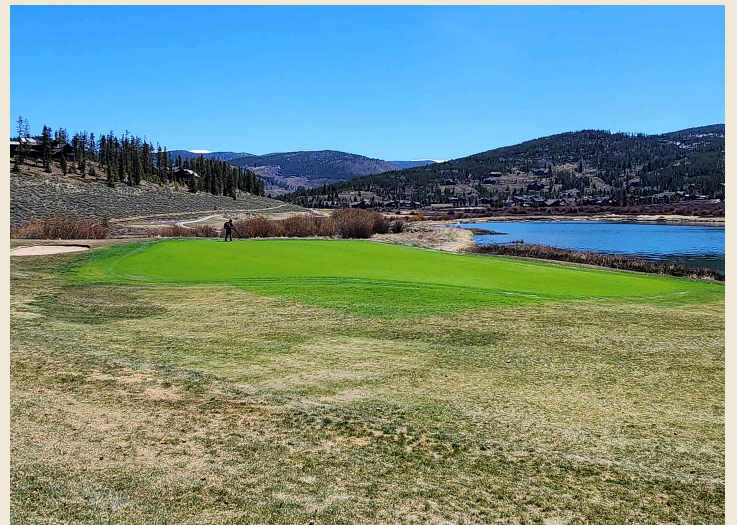

"Greens in very good condition and ready for play by May 1st — which is unheard of for us at 9,500 feet of elevation."

THE COMMITMENT

"Easy to use, durable, and we will continue using this product every spring. It's really a no brainer after seeing the results year after year."

10+

OVERALL PERFORMANCE RATING

"Highly recommend if you are in an area with intense seasonal change like we are here in Breckenridge."

BRECKENRIDGE GOLF CLUB

— A BETTER WAY FORWARD —

Breckenridge Golf Club's experience proves that GreenJacket's Clear Permeable system delivers measurable, repeatable results — even at the most demanding elevations in American golf.

Earlier Playability

Tournament-ready greens by May 1st at 9,500' — six weeks ahead of what's possible without covers.

Season-Long Confidence

Consistent results every spring, regardless of how the course comes out of winter. A proven no-brainer.

Guest Experience

Guests consistently blown away by green quality at an elevation where great early conditions were once impossible.
